

**IN THE CLAIMS**

1. (Original) A stand, comprising: a main body comprising a first component and a second component wherein each component includes a panel and at least one leg extending from the panel, the leg or legs defining a sliding space, wherein leg or legs of the second component move within sliding space of the first component so that the main body expands and contracts as the panel of the first component is moved farther from and closer to, respectively, the panel of the second component.
2. (Original) The stand of claim 1 wherein each of the first and second components includes two legs.
3. (Original) The stand of claim 1, further comprising flanges on each of the panels of the first component and second component, respectively.
4. (Original) The stand of claim 1, wherein the main body is made with one or more of cardboard and a polymeric material and a coated material.
5. (Original) The stand of claim 1, further comprising finger holes defined by each of the walls of the first component and second component, respectively.
6. (Original) The stand of claim 1, further comprising a surface having a greater coefficient of friction than surrounding surfaces.
7. (Original) The stand of claim 1, further comprising indicia on the main body.
8. (Original) A kit comprising: the stand of claim 1 and a container enclosing a bladder containing a liquid, the container including a delivery device, wherein the stand is expanded or contracted to position the container on the stand.
